APPENDIX 2. DATA CODES USED ON SUMMARY TABLES

See Key to Summary Tables in Part 1 (pages 53-56)³³⁵ for a more detailed explanation of codes.

x: Breeding confirmed by at least one pair but no population estimated. When followed by a number (e.g., x3) it indicates the number of nests where breeding was confirmed and does not indicate a population estimate. For all species, breeding is confirmed by the presence of eggs in a burrow, nest, or on a nesting ledge, or unfledged young in or near a nest, including recently hatched or broken eggshells or dead young. These are the only criteria accepted for Black Oystercatchers and Glaucouswinged Gulls, except for gulls nesting in inaccessible
